

Gutterglove Icebreaker

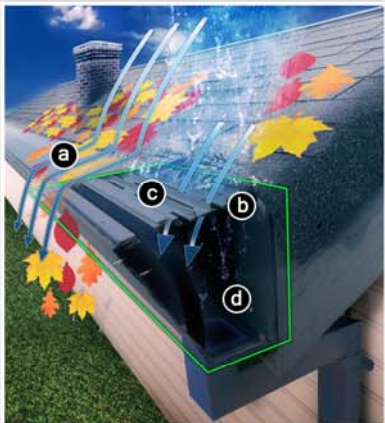

The breakthrough technology of Gutterglove IceBreaker now makes it possible to have gutters in freezing areas of the world.

DEICING

Heated Gutter Guard: IceBreaker radiates the perfect amount of heat all throughout itself to melt icicles, ice dams and snow loads in the winter time with the use of a single self-regulating cable.

- A** Melts icicles and ice dams.
- B** Heat cable installs in front.
- C** Heat radiates throughout aluminum support frame.
- D** Heat radiates downward creating a warm micro-climate to melt ice inside gutter.

FILTERING

Gutter Protection System: IceBreaker keeps out leaves, pine needles, seed pods and even sand from your gutter.

- A** After all the ice melts off and spring sets in, the fine stainless steel mesh filters out leaves, pine needles and roof sand grit from your gutter.
- B** Only rainwater filters through your gutter.
- C** Anodized aluminum frame supports the mesh and channels rainwater to the gutter.
- D** Installs on existing gutters.

No more icicles, snow loads or ice dams on your gutter

Rainwater Harvesting

GO GREEN with Gutterglove

Gutterglove gutter guards are used all over North America in rain harvesting systems (RHS) and even snow and fog harvesting systems because of their filtering ability to keep leaves, pine needles and sand out of gutters and rainwater storage tanks. Each photo in this brochure is from a rain harvesting system that uses Gutterglove Gutterguard.

Photos from Los Angeles Times story titled "Rain Man: Jerry Block plans to save every drop" with his 20,000 gallon rain harvesting system that uses Gutterglove to filter all debris from his rainwater tanks.

Gutterglove®

Gutterguard

**Eliminate
Gutter
Cleaning
Forever™**

3 MESH-FILTERING GUTTER GUARDS TO CHOOSE FROM:

Gutterglove Pro Series

The Pro Series offers uncompromised quality and strength to work with a vast array of roof types from heavy tile to super thick asphalt shingles. It comes in **three sizes** and is designed to fit a variety of gutter sizes ranging from 2" to 7.5" and can even span to fit a 14" gutter when doubled up.

Gutterglove Ultra

Ultra is a lower cost version of the Pro Series. It was specifically designed for the homeowner with a limited budget. We sacrificed just a little strength and can still be used on most gutter and roof types.

Gutterglove IceBreaker

Gutterglove IceBreaker is a heated gutter guard that attaches to the top of your existing gutter and melts icicles, ice dams, and snow loads in the winter while continuing to filter out leaves, pine needles and sand all year long.

www.Gutterglove.com

BENEFITS:

- Keeps out leaves, pine needles and small roof sand grit from your gutter system!
- Gutter cleaning is eliminated forever!
- Fits on your existing gutter!
- Barely visible from the ground!
- 316 surgical-grade stainless steel mesh!
- Virtually maintenance free!
- Filters over 200 inches of hourly rainfall!
- #1 choice amongst rainwater harvesters!
- Hardened anodized aluminum frame!
- Lifetime Warranty!

HOW IT WORKS:

Gutterglove slips easily under the shingles of your roof and securely fastens to the front lip of your gutter. It fits on any roof type and gutter type. When installed at the same pitch of your roof, virtually all debris slides off. Gutterglove is extremely rigid and won't crack, cave in your gutter or collapse over time.

Gutterglove was featured on Discovery Channels "Renovation Nation", and in several TV news stories across the country on ABC, CBS, NBC, CW and FOX for its hi-tech filtering abilities.

Gutterglove Installs On All Roofs

Asphalt Shingle

Thick Flat Concrete Tile

Spanish Tile

Standing Lock Seam

Flat Patio Deck or Roof

Stone Coated Steel

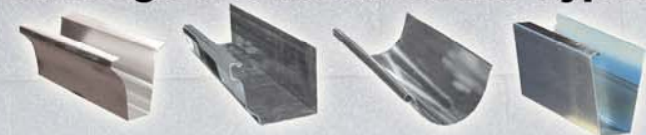

Wood Shake

Thin Fibrous Tile

Gutterglove Fits All Gutter Types

Curved

Half Round

Fascia

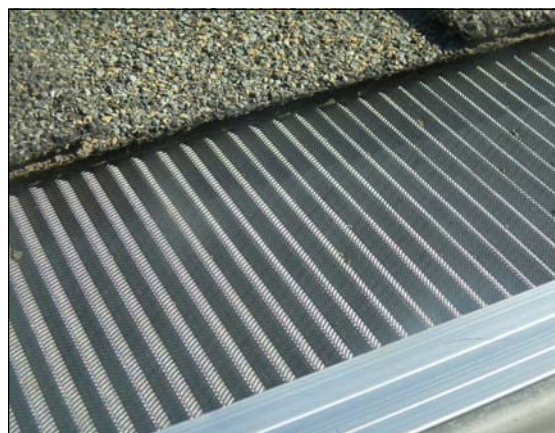

Eliminate Gutter Cleaning Forever!

- Keeps out leaves, pine needles and small sand grit from your gutters!
- Never clean out your gutters again!
- Fits on virtually any existing gutter!
- Great for rain harvesting!
- **Lifetime Warranty** your gutters will never clog!
- Handles over 200 inches of hourly rainfall!
- Translucent appearance makes it blend in with the color of your roof!
- **LOW COST & AFFORDABLE!**

LeafBlaster gutter protection brings mesh-filtering technology to a whole new level. Made from 316 surgical stainless steel mesh and a hardened aluminum extruded strip, fastens easily to the front lip of your gutter.

LeafBlaster's unique design makes it low cost because it doesn't need an aluminum support to hold it up. It uses a series of "V" bends to create it's unusually strong support structure.

Gutterglove™

Gutter Guard

“THE SELF CLEANING GUTTER GUARD”™

Gutterglove™ Gutter Guard was created by a professional gutter installation company that was tired of all the misleading claims and poor performance of other gutter guards in the industry. We evaluated reverse curve gutter guards, perforated plastic and metal gutter guards, flimsy plastic-mesh combo gutter guards, vinyl gutter guards and expanded metal roll gutter guards... but none of these products met the demands of homeowners. So we developed a product that does meet these demands: GUTTERGLOVE. It's the last gutter guard a homeowner will ever need.

- Easy to Install.
- Strongest gutter guard in the world!
- Lifetime warranty!
- Outperforms every gutter guard on the market!
- Naturally sloped so debris rolls off the gutter!
- Fits on existing gutters of any type of roof!
- Patent pending technology!
- No rain gutter and downspout clogs ever!
- Virtually maintenance free!
- Dealers Wanted!
- Highly profitable business opportunity!
- FREE marketing brochures!
- FREE website!
- FREE training and support!

A RAIN HARVESTING SYSTEM

- | |
|---------------------------|
| 1. Rain Catchment Area |
| 2. First Stage Filter |
| 3. Catchment Tube |
| 4. Roof Washer |
| 5. Water Intake |
| 6. Water Storage Tank |
| 7. Air Gap |
| 8. Overflow |
| 9. Pump |
| 10. Water Level Indicator |
| 11. Fire Hydrant |

- 1 **Rain Catchment Area:** The roof is used as a collection point where all the rain drops land and congregate together. They immediately slide towards the gutter.
- 2 **First Stage Filter:** The Gutterglove filter system keeps all the leaves, pine needles and seed pods out of the gutter and rain tank.
- 3 **Catchment Tube:** Made from pvc pipe, this tube is connected to the bottom of the gutter and channels the rainwater towards the roof washer (also known as a 'First Flush').
- 4 **Roof Washer:** This oversized pvc tube collects the first several gallons of dirtier rainwater from the beginning of each rain event and diverts it away from the rain tank.
- 5 **Water Intake:** The rainwater enters the rain collection tank from here.
- 6 **Water Storage Tank:** This is where the rainwater is collected for later use.
- 7 **Air Gap:** This allows for the exchange of air in and out of the rain tank so the tank doesn't collapse when the rainwater is used up.
- 8 **Overflow:** When the rain tank fills up with rainwater, the excess rainwater will exit here.
- 9 **Pump:** This unit will pump the rainwater out so it can be used for outdoor watering needs. A pump is not always needed because natural gravity flow will be sufficient most of the time on level ground. It all depends on what your watering needs are.
- 10 **Water Level Indicator:** This vinyl see-through tube allows you to see how much rainwater is left in the tank.
- 11 **Fire Hydrant:** Rain harvesting systems that are generally over 2,500 gallons in size can consider having a fire hydrant installed to use the rainwater for helping put out a house fire.
